Experience

Actia-Events

This platform will be designed to simplify the organization of various events, whether they are professional, social, or cultural at Actia. The objectives of this platform will be to manage events and their activities and send emails to invite each guest.

Technologies: **Angular, Firebase**

Summer internship at ASM

E-commerce website for a store using the Laravel framework that provides both client and admin interfaces.

Technologies: **LARAVEL**

Academic project

End-of-year project

This project focused on the development of an IoT dashboard with a microservices architecture, designed to monitor connected devices, process and visualize the data they generate.

Technologies: **Spring Boot - Java, MongoDB, and Angular**

coffee shop management application

As part of an academic project, this is a desktop application designed to manage servers, their recipes, orders, and the inventory of a café. The tool includes a dashboard for visualizing sales statistics.

Technologies: **c#/.NET**

Project JEE

A simplified application that allows students to create and list their complaints, and an administrator to manage student accounts. A complaint is submitted by a student and must include a title, a description, and the type of the complaint. Administering the application involves enabling or disabling a student's account.

Technologies:**JAVA/JEE**

Search engine

A search engine used to search queries within a file index.

Technologies:**c++**
